eSight Corporation Provides Realistic Vision for Legally Blind People with the Launch of eSight 3

At a cheaper cost, wearers can now perform daily activities easily with eSight 3 upgrades

Canada - November 22, 2017 - eSight Corp. announces today that they are releasing the eSight 3 which is a significant upgrade from the eSight 2. The eSight 3 is smaller, lighter, and includes higher image resolution, Bluetooth, and HDMI functionalities that allows wearers to participate in mobile activities with ease. The eSight 3 is also cheaper, marked at a price of \$9,995 which is 33% lower than the original eSight.

The CEO of eSight Corp., Dr Brian Mech said, "eSight 3 is a game-changer for the legally blind. My entire career has been spent engineering sight-enabling technologies, so I can say with some authority that eSight's world-class lab is the largest and best engineering team, anywhere in the world, that specializes exclusively in developing medical devices that allow the legally blind to *actually* see and be mobile."

The eSight 3 features its patented Bioptic Tilt capability which allows wearers to adjust the glasses in any position. The adjustment gives users the choice to choose their video to peripheral view ratio. Configuring the position aids in eliminating nausea or headaches that often come as a side effect when wearing any kind of vision device. This capability is the reason why wearers will be able to perform daily activities effortlessly.

Not only does the eSight 3 improve vision, it also adds to it. eSight's algorithm makes video feed have no latency issues - which simulates everything in real time. Wearers will have the option to stream videos and games, take pictures, set color and brightness settings, and zoom in up to 24 times the original view. These enhancements make the average wearer have advantages even over those with no vision issues.

Additionally, eSight Corp. believes in helping everyone- including those who cannot afford their product. They continually decrease the price of new products and have advocates that will help you fundraise the cost by reaching out to insurance companies, providing low or no-interest payment plans, and outsourcing.

About eSight Corporation

"Our core belief is that everyone deserves to see." Established in 2006, eSight's goal is to provide legally blind people an alternative solution to surgical procedures in order to see. eSight has one of the most highly funded labs which allows them to continue making breakthrough discoveries in technology to help those that need it. Their products are directed towards a large group of individuals including those who have: Macular Degeneration, Diabetic Retinopathy, Stargardt's Disease, Ocular Albinism, Leber's Hereditary Optic Neuropathy, Cone-Rod Dystrophy some forms of Glaucoma, and Retinitis Pigmentosa.
